- True or False: Carbon is more stable bonded to another atom of carbon than it is alone.
- True or False: Oxygen is a diatomic element. It will always have a "2" for a subscript in a chemical equation.
- True or False: Fluorine does not have a "2" for a subscript in LiF because those subscripts come from balancing out the charges.
- Fill in the blank: Once subscripts are in place, they should not be changed. _____ are added to balance the equation.
